	onesa ay again containg chairer sets
432 Typical side-message: "The recipient's Exchange Server incoming mail queue has been stopped". It's a Microsoft Exchange Server's SMTP error code. You should contact it to get to a connection problem.	et more information: generally it's due
The recipient's server is not responding. There's an issue with the user's incoming server: yours will try again to contact in	
442 The connection was dropped during the transmission. A typical network connection problem, probably due to your router: check it imm	nediately.
The maximum hop count was exceeded for the message: an internal loop has occurred. Ask your SMTP provider to verify what has happened.	
Your outgoing message timed out because of issues concerning the incoming server. This happens generally when you exceeded your server's limit of number of recagain segmenting the list in different parts.	ipients for a message. Try to send it
449 A routing error. Like error 432, it's related only to Microsoft Exchange. Use WinRoute.	
"Requested action not taken – The user's mailbox is unavailable". The mailbox has been corrupted or placed on an offline server, or your email hasn't been accepted for IP problems or blacklisting. The server will retry to mail the message again, after some time. Anyway, verify address.	•
"Requested action aborted – Local error in processing". Your ISP's server It's normally a transient error due to a message overload, but it can refer also to filter. If it keeps repeating, ask your SMTP provider to check the situation. (If you connection problem.	
452 Too many emails sent or too many recipients: more in general, a server storage limit exceeded. Again, the typical cause is a message overload. Usually the next try will succeed it will come with a side-message like "Out of memory".	d: in case of problems on your server
An error of your mail server, often due to an issue of the local anti-spam filter. Contact your SMTP service provider to fix the situation.	
500 A syntax error: the server couldn't recognize the command. It may be caused by a bad interaction of the server with your firewall or antivirus solve it.	s. Read carefully their instructions to
Another syntax error, not in the command but in its parameters or arguments. In the majority of the times it's due to an invalid email address, but it can also be problems (and again, an issue concerning your antivirus settings).	e associated with connection
The command is not implemented. The command has not been activated yet on your own server. Contact your pro-	ovider to know more about it.
The server has encountered a bad sequence of commands, or it requires an authentication. In case of "bad sequence", the server has pulled off its commands in a wrong or connection. If an authentication is needed, you should enter your username and	
504 A command parameter is not implemented. Like error 501, is a syntax problem; you should ask your provider.	
510/511 Bad email address. One of the addresses in your TO, CC or BBC line doesn't exist. Check again you any possible misspelling.	our recipients' accounts and correct
512 A DNS error: the host server for the recipient's domain name cannot be found. Check again all your recipients' addresses: there will likely be an error in a domainstead of mail@domain.com).	ain name (likemail@domain.coom
513 "Address type is incorrect": another problem concerning address misspelling. In few cases, however, it's related to an authentication issue. Doublecheck your recipients' addresses and correct any mistake. If everything's caused by a configuration issue (simply, the server needs an authentication).	s ok and the error persists, then it's
The total size of your mailing exceeds the recipient server's limits. Re-send your message splitting the list in smaller subsets.	
Normally, an authentication problem. But sometimes it's about the recipient's server blacklisting yours, or an invalid email address. Configure your settings providing a username+password authentication. If the erecipients' addresses and if you've been blacklisted.	error persists, check all your
The recipient address rejected your message: normally, it's an error caused by an anti-spam filter. Your message has been detected and labeled as spam. You must ask the recipient address rejected your message in a spam.	pient to whitelist you.
550 It usually defines a non-existent email address on the remote side. Though it can be returned also by the recipient's firewall (or when the incoming errors 550 simply tell that the recipient email address doesn't exist. You should get the right address.	
"User not local or invalid address – Relay denied". Meaning, if both your address and the recipient's are not locally hosted by the server, a relay can be interrupted. It's a (not very clever) strategy to prevent spamming. You should contact your IS certified sender. Of course, with a professional SMTP provider like turboSMTP your like turboSMTP is a certified sender.	
"Requested mail actions aborted – Exceeded storage allocation": simply put, the recipient's mailbox has exceeded its limits. Try to send a lighter message: that usually happens when you dispatch emails to first.	with big attachments, so check them
Requested action not taken – Mailbox name invalid. That is, there's an incorrect email address into the recipients line. Check all the addresses in the TO, CC and BCC field. There should be an error	or a misspelling somewhere.
This means that the transaction has failed. It's a permanent error and the server will not try to send the message again. The incoming server thinks that your email is spam, or your IP has been blacklis in some spam lists, or rely on a professional SMTP service like turboSMTP that
